

# SPARTA

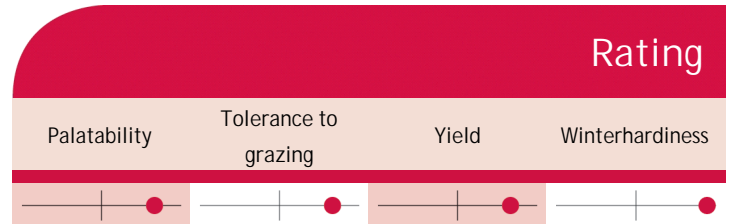

## Dactylis glomerata

## Orchardgrass

Combining late heading with yield

- Leafy type with high palatability
- Perfect yield distribution
- Good winterhardiness
- Late maturity

### Leafy Type with High Palatability

SPARTA is a leafy type medium tall growing with many tillers. The leafy growth makes SPARTA more palatable to animals compared to earlier types which tend to become more stemmy earlier in the spring.

### Perfect Yield Distribution

The yield distribution of SPARTA is very good as shown in the figures below. SPARTA is characterized by a good production in spring, a continued high production during summer and autumn.

### Good Winterhardiness

The winterhardiness of SPARTA has been tested with a positive result in Austria. Lately, SPARTA has been listed in Russia due to its good winter performance.

### High Disease Resistance

SPARTA has proved to have a good resistance to Mastigosporium and Rust.
